SUMMARY

Software Engineer with 3.5 years of experience building scalable, enterprise-grade distributed systems and AI-augmented applications. Skilled in React, Node.js, Python (FastAPI), Microservices, Kafka, Docker, Kubernetes, and AWS. Proven track record of owning system architecture, building node-based pipeline engines, and modernizing legacy infrastructures to drive performance and operational efficiency.

SKILLS

- **Core Languages & Frameworks:** Python, JavaScript (ES6+), TypeScript, FastAPI, Node.js, Express.js, React.js, Redux
- **Distributed Systems & Backend:** Microservices, Apache Kafka, REST APIs, Socket.IO, JWT, Identity & Access Management (IAM/ RBAC)
- **DevOps, Cloud & Infrastructure:** Docker, Kubernetes (K8s), AWS, Nginx, Linux, CI/CD, Vercel
- **Architecture & Data:** Micro-Frontend (Single-SPA), Directed Acyclic Graphs (DAG), Data Pipeline Architecture, MongoDB, Delta Lake Integration
- **Development & Tooling:** AI-Augmented Workflows, Prompt Engineering, Code Safety & Scalability Review, Git, GitHub, Jira, Postman, Agile (Scrum), TDD, SOLID Principles, SonarCloud

PROFESSIONAL EXPERIENCE

Infor (India) Pvt Ltd | Associate Software Engineer

Hyderabad, India | Oct 2023 – Present

- **Visual Pipeline & Automation Platform:** Architected and delivered a node-based visual ETL platform (React, Node.js, Python) for data cleansing, joining, transformation, and enterprise system ingestion, reducing manual operational effort by 40%.
- **Distributed Backend Infrastructure:** Engineered high-throughput microservices using FastAPI and Node.js to handle complex asynchronous data workflows under high operational loads.
- **AI-Augmented Engineering:** Integrated AI-assisted development workflows and prompt engineering evaluations to accelerate code reviews, enforce edge-case coverage, and maintain SOLID design standards across microservices.
- **Event-Driven Architecture:** Implemented asynchronous inter-service communication and event streaming layers using Apache Kafka to ensure decoupled, fault-tolerant message distribution.
- **Containerization & Orchestration:** Deployed and managed containerized microservices utilizing Docker and Kubernetes across AWS environments, ensuring automated scaling and reliable deployments.
- **Micro-Frontend Architecture:** Owned and optimized UI micro-frontends using Single-SPA, containerized via Docker and served through Nginx to improve frontend performance and decoupled deployment workflows.
- **Access Control & Security:** Designed an enterprise-grade Identity and Access Management (IAM) engine featuring Role-Based Access Control (RBAC) aligned with cloud security best practices.
- **Codebase Refactoring & Quality:** Led refactoring initiatives across legacy modules, resolving over 5,000 SonarCloud static analysis issues to improve maintainability and structural stability.

Masai School | Software Engineer Intern

Remote | Feb 2023 – Sep 2023

- **Core Engine Development:** Developed algorithmic evaluation modules and automated scoring pipelines for a large-scale Learning Management System (LMS).
- **Platform Scaling:** Contributed to backend development and system optimization for an enterprise-level automated interview orchestration system.

KEY PROJECTS

Custom Notebook | AI-Powered Knowledge & Research Platform

[Live Demo](#) | [GitHub Repo](#)

- **Hierarchical Context Engine:** Built a research platform with infinitely nestable folder structures (DAG hierarchy) and context-aware LLM prompting that injects parent domain context into research workflows.
- **Real-Time Collaboration & Sharing:** Architected inline editable research sections and read-only secure sharing protocols with granular access controls for note sharing, deployed live on Vercel.

EDUCATION

Maulana Abul Kalam Azad University of Technology (MAKAUT)

Aug 2018 – May 2022

Bachelor of Engineering (Electrical Engineering) | West Bengal, India
